3/14 notes

○ Loading thing for generating study

○ Include abstract, add abstract tab with info directly from study

○ Ask questions like "what is the phenotype of the animal" and "How does the mouse knockout differ it from another mouse" and "Which knockout represents gender dimorphism" Scientists need to explain what they are seeing in the plot.

○ Multiple API services

○ Plot the genes against mice

○ Clicking option, then a pop up section shows. Make everything pre exposed instead.

○ One submit button, one for background that will explain how each section is filled.

○ Separating data (what users see) from code/logic (what developers see).

○ Choice for API in case one is down
